

# Low-Level Software Engineer

xorlab is an ETH Zürich Spin-Off company that develops solutions to defend against sophisticated cyber attacks (Zero-Days). Our flagship product is our network appliance solution that detects file-based Zero-Day exploits and exploit kits on websites. The appliance is deployed into an organization's network and protects client systems against these sophisticated client-side attack vectors.

## We are looking for a full-time employee

You have:

- Masters degree in Computer Science (or equivalent experience)
- A passion for IT security and software security
- Experience in low-level software engineering with C/C++ and x86/x86\_64/ARM machine language
- Deep knowledge of the Windows run-time
- Experience in exploit writing and reversing

What we offer:

- Early employee equity program
- Great environment to excel and develop your skills and personality
- Opportunity to build a great new IT security product with us
- Flat organization and a lot of responsibility
- Open culture where you can express your ideas and shape the future
